Post-Secondary Employment Outcomes (PSEO)

A new collaboration between university systems and the Census Bureau

A joint pilot project between university systems, state longitudinal data systems, and the Census Bureau, the **Post-Secondary Employment Outcomes (PSEO)** are experimental tabulations providing national earnings statistics for graduates of post-secondary institutions.

Goal:

- Provide students and parents better data on the return on investment of and employment destinations for post-secondary degrees

Meeting a Data Need

There is a great deal of interest in making the economic returns to higher education more transparent.

- Institutions want to know how their graduates are doing after they leave campus
- Students want to know how much a degree could increase their earning potential, and whether or not borrowing for college is a sound investment.
- Policy makers/economic/workforce development specialists want to better understand the role of higher education in regional economic development.

Comparison with other initiatives

College Scorecard:

- Obama administration initiative to promote transparency in returns to college
- Data on earnings by institution, for enrollees who received financial aid
- *Shortcomings*: No program level data, not broken out by whether student graduated with a degree

State-level initiatives

- Lots of state higher education boards and university systems have partnered with their workforce agencies to match UI data to university records
- Publically available data from these projects vary, but many release institution or program level data
- *Shortcomings*: Earnings captured only for graduates that remain in the state, no universal methodology makes comparing earnings across programs difficult

PSEO Output Tables

- Graduate Earnings Table
 - 25th, 50th, and 75th percentiles of annual earnings for college and university graduates
 - By degree level, degree major, and post-secondary institution
 - One year, five years, and 10 years after graduation
- Employment Flows Table
 - Employment by industry sector and Census Division of the country
 - By degree level, degree major, and post-secondary institution
 - One year, five years, and 10 years after graduation

Post-Secondary Employment Outcomes (PSEO)

Can compare short run vs long run returns to degree

Initial Earnings and Earnings Growth 10 Years After Degree: University of Texas at Austin Graduates

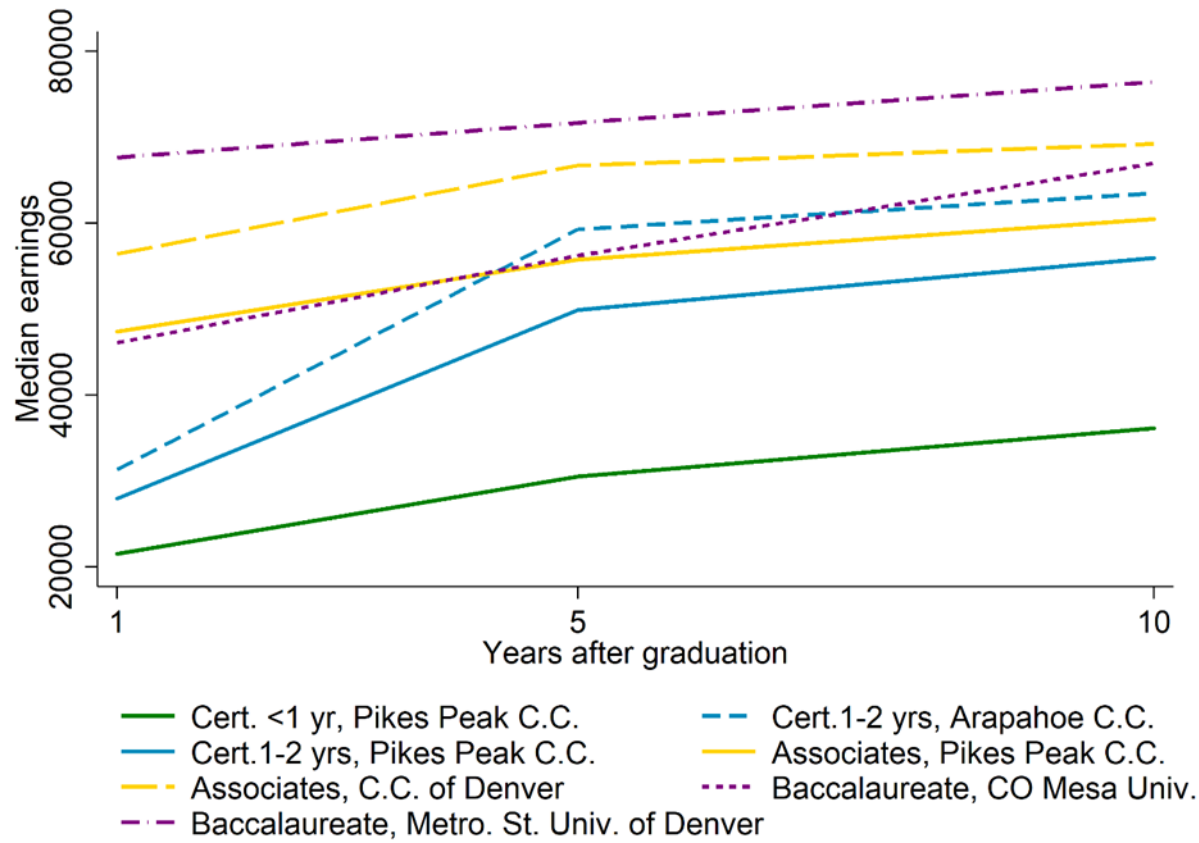

Source: U.S. Census Bureau, Post-Secondary Employment Outcomes (PSEO) data for the 2001-2003 graduate cohort of University of Texas at Austin. Select majors. Earnings are in 2016 dollars.

Post-Secondary Employment Outcomes (PSEO)

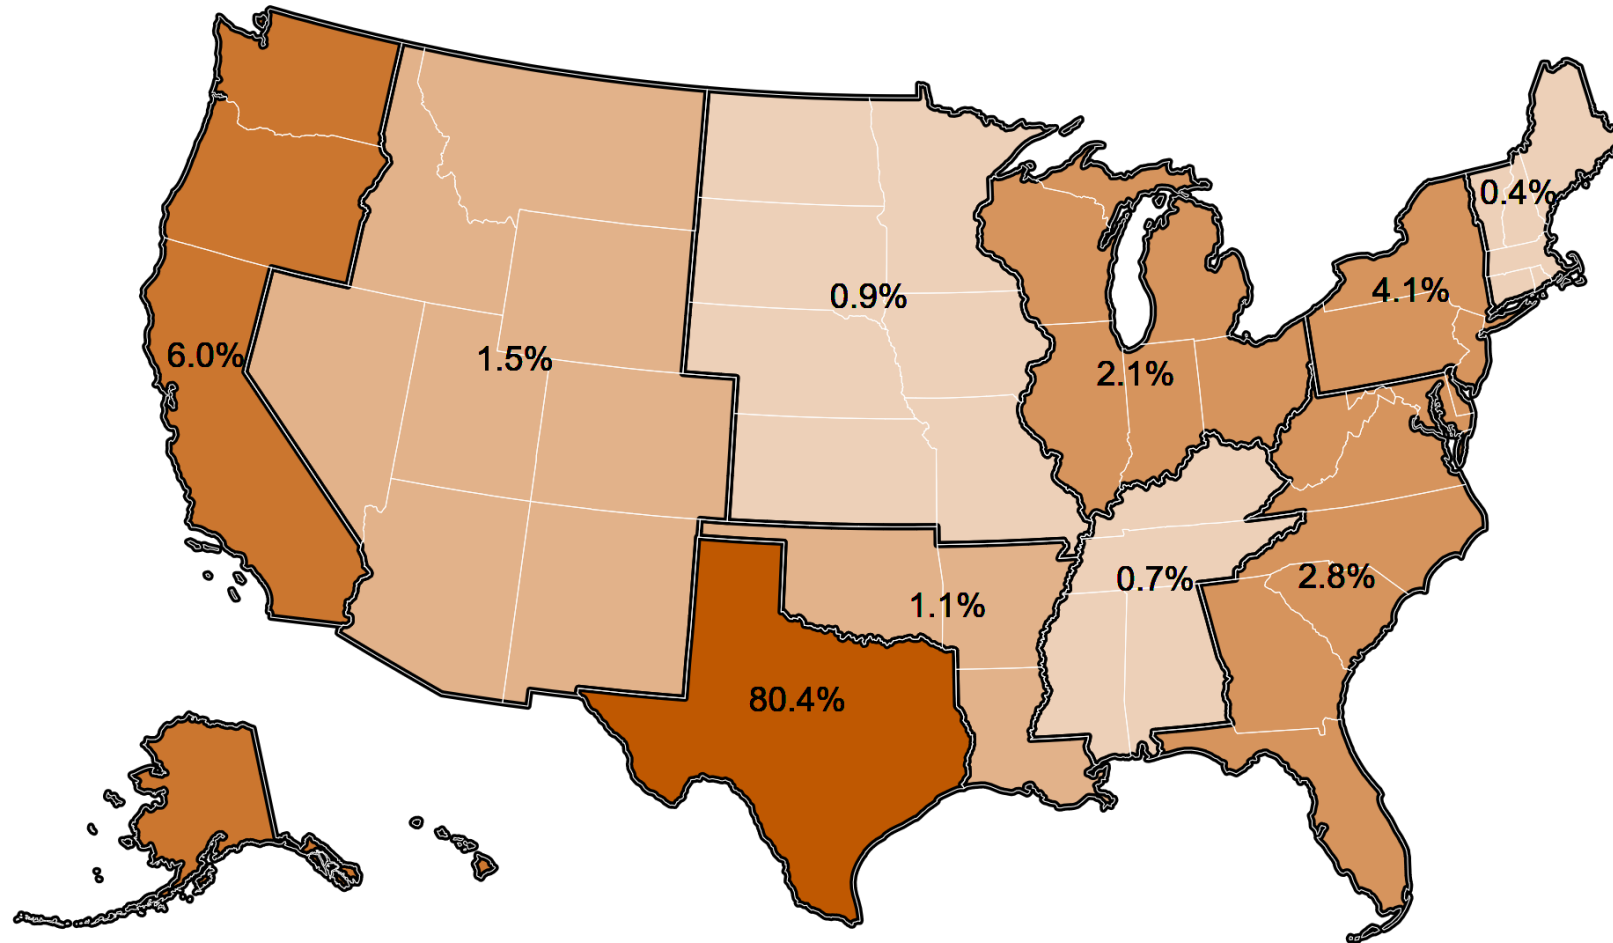

Can compare similar degrees across institutions

Earnings Outcomes for Different Types of Nursing Degrees for Graduates from Selected Institutions in Colorado

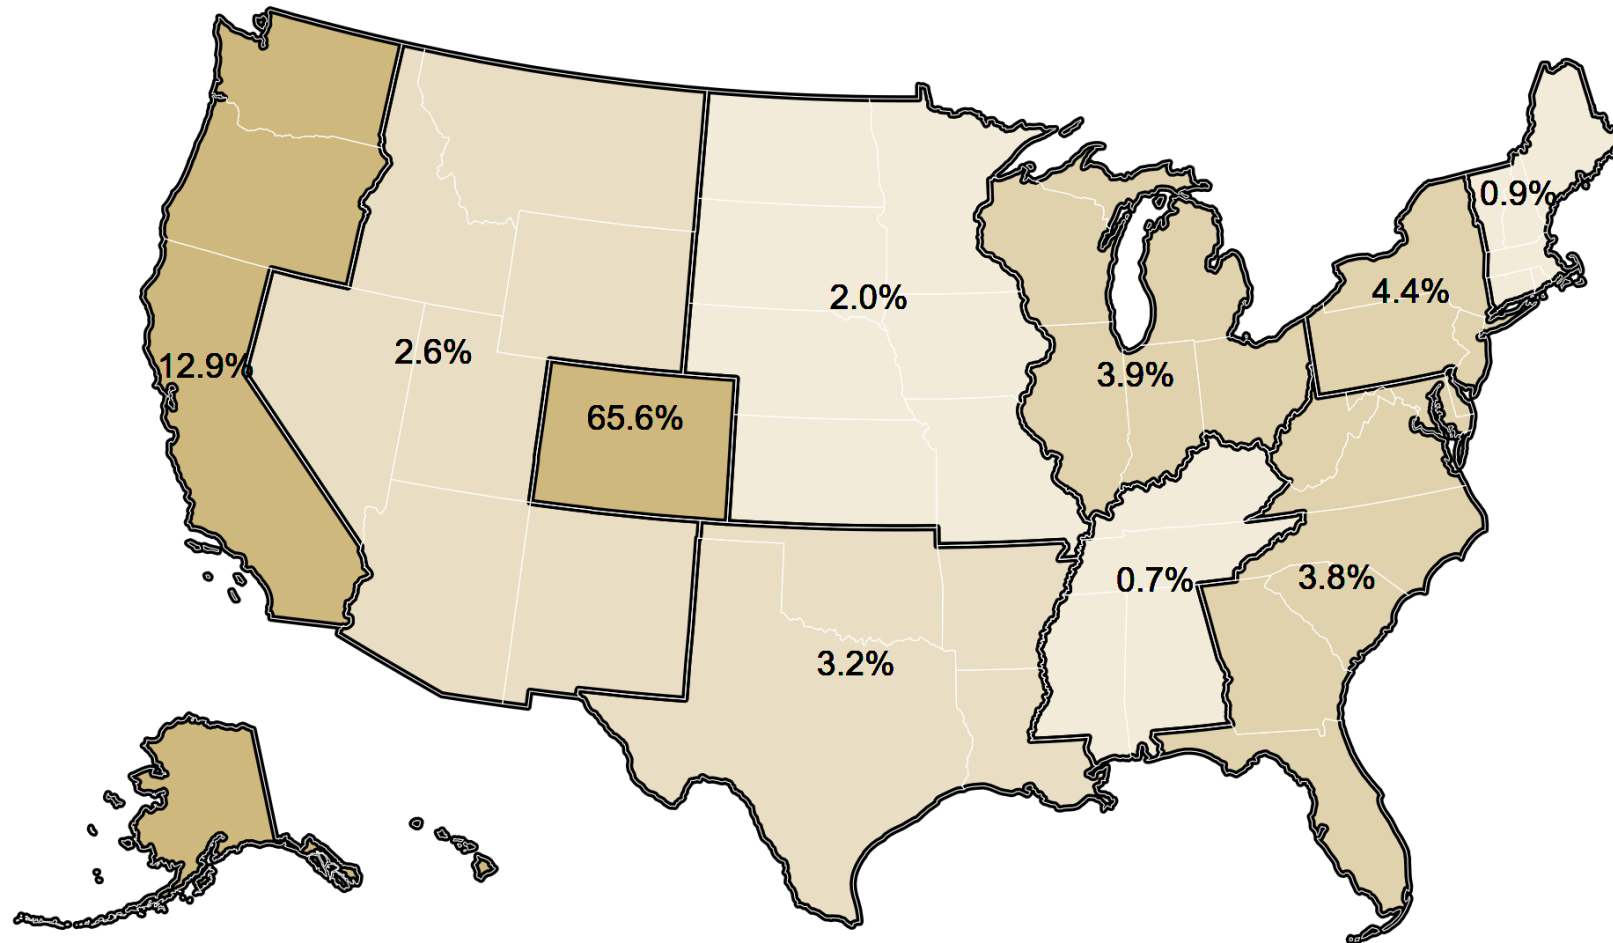

Source: U.S. Census Bureau, Post-Secondary Employment Outcomes (PSEO) data for 2001-2003 graduation cohort from selected programs in Colorado. Earnings are in 2016 dollars.

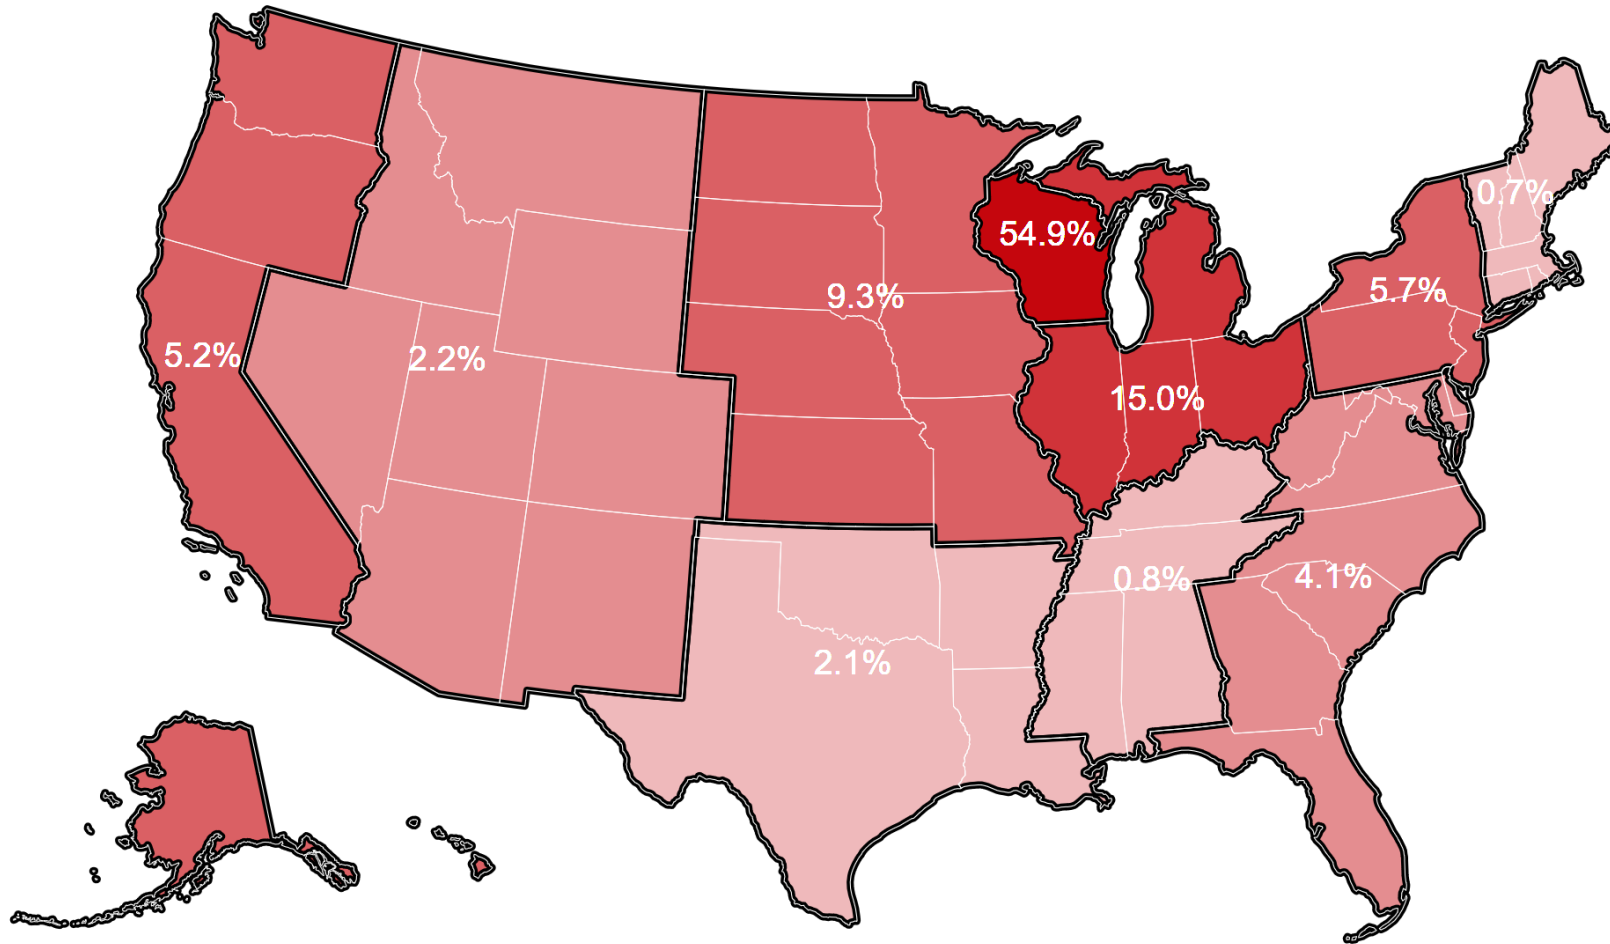

University of Texas, Austin

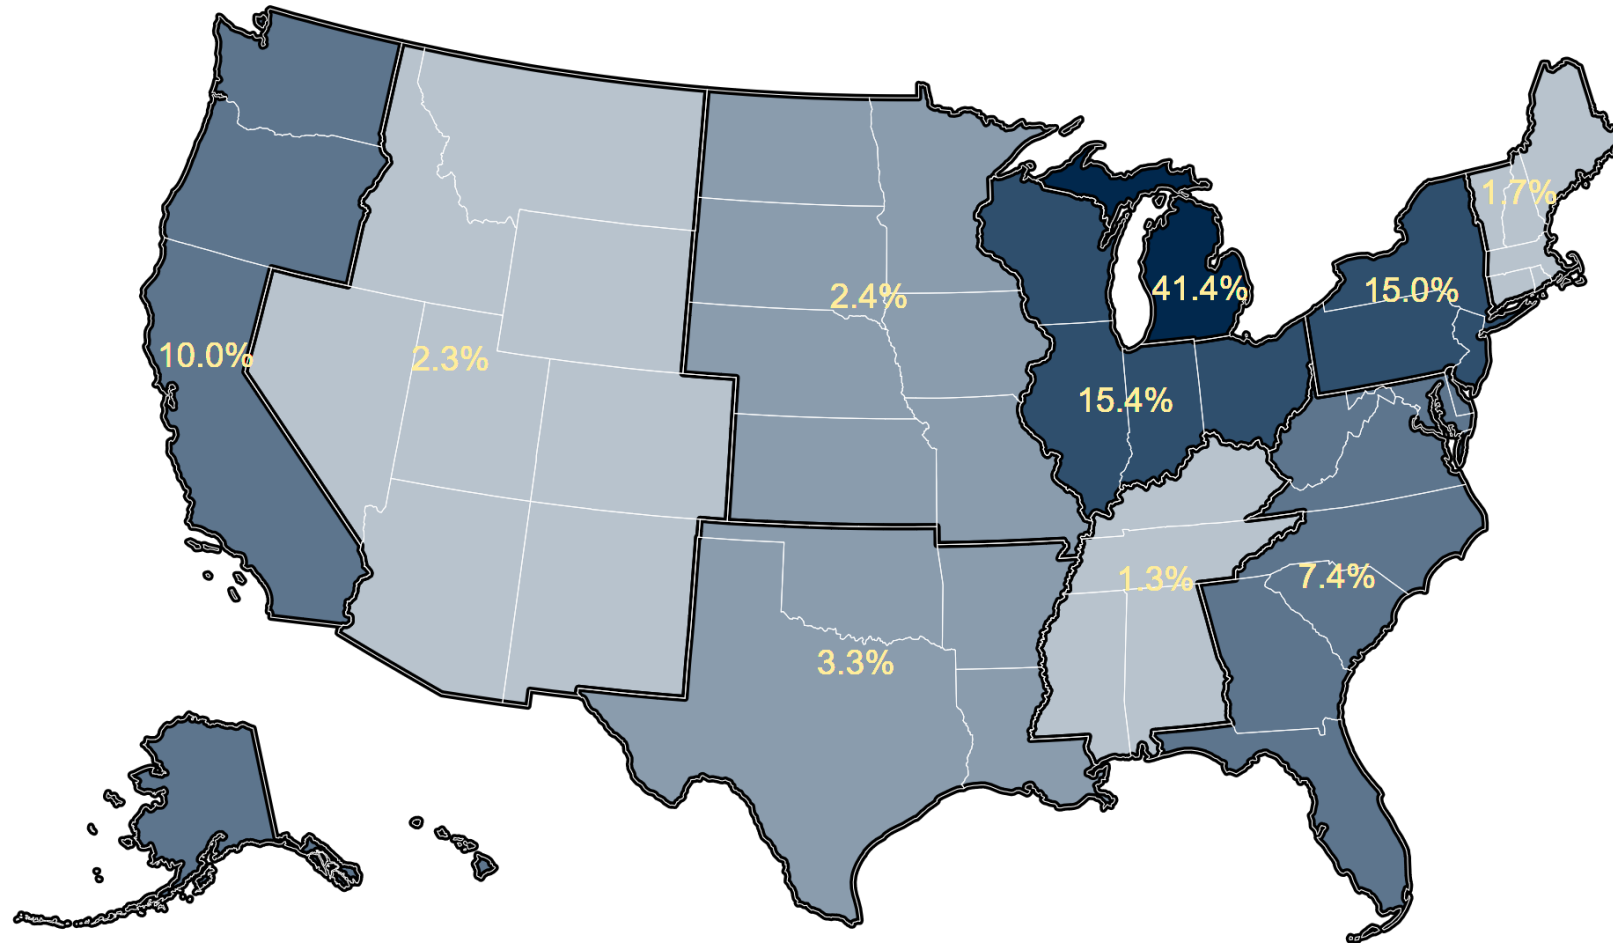

University of Colorado - Boulder

University of Wisconsin Madison

University of Michigan – Ann Arbor

Current Partners

Currently partnering with Census for the PSEO pilot are:

- The University of Texas System
- Colorado Department of Higher Education (all public two- and four-year institutions in Colorado)
- University of Michigan, Ann Arbor; University of Wisconsin, Madison.

Currently in talks to expand pilot to public four-year institutions and community colleges in seven states, with a longer queue after that.

Next Steps

- Incorporate W2 and 1099 data to improve earnings data coverage
- Expand number of participating institutions
- Data visualization tool for the Employment Flows tables

What Is seekUT?

- seekUT is a free, online consumer tool developed with the input of students for students
 - Shows a 10-year data span of earnings in the context of average loan debt, by program
 - Offers the ability to compare earnings and debt by various programs side-by-side
 - Goes beyond the median to show percentiles
 - Indicates the percent of students who continue their education beyond baccalaureate degree

TOP 3 INDUSTRIES WHERE GRADUATES WERE WORKING AFTER GRADUATION

Graduates found working in Texas from the Texas Workforce Commission (TWC). Industries as defined by [North American Industry Classification System](#) (NAICS, 2-digit). Note: Records do not include employer, so work "in field" cannot be verified. For some majors and industries the connection may be more obvious. More detail about match rates on the next page.

Year 1		Year 5		Year 10	
Professional Scientific and Technical Services	28.55%	Professional Scientific and Technical Services	30.64%	Professional Scientific and Technical Services	30.06%
Manufacturing	26.64%	Manufacturing	23.50%	Manufacturing	23.59%
Mining Quarrying and Oil and Gas Extraction	13.70%	Mining Quarrying and Oil and Gas Extraction	10.91%	Wholesale Trade	8.89%

EARNINGS AFTER GRADUATION

Gross wages of graduates found working in Texas for the equivalent of full time for a full year and not enrolled in school. Adjusted for inflation (in 2014 dollars).

	25th Percentile	Median	75th Percentile
Year 1	\$59,843	\$69,859	\$80,272
Year 5	\$71,326	\$85,414	\$106,437
Year 10	\$85,331	\$107,608	\$141,664

POST-COLLEGIATE OUTCOMES (DRAFT)

University of Texas System Office of Institutional Research and Analysis | Spring 2019

The University of Texas at UT Austin - Business Administration and Management, General

What kinds of industries do graduates go into and how much are they earning? Most Higher Education institutions either survey their graduates or are simply unable to collect earnings information. In 2014, the University of Texas System reached an agreement with the U.S. Census Bureau to share earnings and industry data. Since 2014, the UT System has disseminated that data through its interactive website, SeekUT <https://seekut.utsystem.edu/>, which allows any user to explore graduate earnings information. The purpose of this brief is to highlight the employment outcomes from the University of Texas at UT Austin.
